MMS and Implants/Transplants

<https://g2cforum.org/index.php/list/general-discussion/29562-implants#49971>

Hi there,

My partner has a Kidney transplant of twenty years now and she regularly takes CDS for various things like urinary tract infections and to nip colds and flues in the bud. She has numerous blood tests and they can detect antibiotic like activity. Her transplant was under stress five years ago and deteriorating, but since CDS/MMS she has become very stable and the doctors are very happy with her progress. At twenty years she is now one of the longest in New Zealand.

Before CDS/MMS, the use of antibiotics always had a bad effect on her health. She would have to rest for two days after one good day out. Now she never needs rest days at all. I make the CDS as she prefers it to MMS, as we both did the old high dose protocols and she got heartily sick of the MMS - citric acid taste. She now is up early, rides her horse, walks the dogs an average of 6 kms a day and cooks the evening meal. Every day!!!

So from five years and first hand experience with MMS/CDS, we know that it is very beneficial and does not interfere with transplant drugs. Hope this helps.

IMPLANTS: Many people have some type of implant in their body. There are **heart valve replacements, organ replacements, tissue grafts, bone marrow transplants, metal plates, rods and screws for broken bones or spinal issues, breast implants of silicone or other solutions, body plumping implants around lips or eyes**, etc. I have been questioned as to how much MMS will impact some of these implanted foreign objects.

I am wondering if anyone knows of folks who have implants, and have also used MMS, and if they experienced any effects to the implant area? Or if there is any research on the topic that would give us some answers?

Thanks.
